

Jim Athanasiou

The SLSMC is responsible for operating and maintaining the Canadian portion of the Seaway's navigation locks and channels located between Montreal and the North American Great Lakes.

As Vice President, Engineering and Technology, Jim is responsible for engineering solutions and their implementation to ensure the reliability of the St. Lawrence Seaway infrastructure, and for leveraging technology to drive business results.

Jim has been with the Seaway since 2008, and led the Modernization Program which includes the installation of Hands Free Mooring and Remote Operations.

Previous to joining the SLSMC, Jim worked in the pulp and paper industry where he held various operational and technical positions.

Holding an Engineering degree, as well as a Master of Business Administration, Jim brings both operational and strategic knowledge to his role of improving operational results and developing long-term direction and capacity.
